5 Critical Factors You Need to Consider for Laser Alignment Tools

There may be no more critical factor in the success of a new alignment program than selecting the proper alignment system.

Whether you are starting a new alignment program, or planning to move from straight edge / dial indicator alignment to laser alignment, there are several considerations to keep in mind to ensure you get the best value, not just the lowest price.

Before you start, make sure you know what you need it for, and what types of alignments you will be doing. Have a list of what you want in the way of features and rank them by actual need vs. cost.
